Introduction :

The project Hospital Management system includes registration of patients, storing their details into the system, and also computerized billing in the pharmacy, and labs. The software has the facility to give a unique id for every patient and stores the details of every patient and the staff automatically.

Problem Statement:

A system to manage the activities in a hospital: New patients update their details in the system before they request for appointment with the help of assistant. The assistant confirms the appointment based on the availability of free slots for the respective doctors and the patient is informed.

Objective of Project:

Objectives of the system: The project "Hospital management system" is aimed to develop to maintain the day –to-day state of admission/discharge of patients, list of doctors, reports generation, and etc. It is designed to achieve the following objectives:

1. To computerize all details regarding patient details & hospital details.

2. Scheduling the appointment of patient with doctors to make it convenient for both.

3. Scheduling the services of specialized doctors and emergency properly so that facilities provided by hospital are fully utilized in effective and efficient manner.

4. The information of the patients should be kept up to date and there record should be kept in the system for historical purposes.
